Nimbus R2 ’Kestrel’ - Product Guide (fictional product)

What is the Kestrel?
The Kestrel is an indoor inventory drone for warehouses. It scans shelf barcodes and RFID tags while flying a pre-planned route and syncs results to the Nimbus Cloud.

Battery and charging
The Kestrel flies for 38 minutes on one charge. A full recharge on the docking station takes 55 minutes. The battery is rated for about 900 charge cycles before capacity drops below 80%.

Pricing
The Kestrel costs 7,900 EUR per unit. The Nimbus Cloud subscription costs 149 EUR per drone per month. Customers ordering 10 or more drones get a 12% discount on hardware.

Warranty
Hardware comes with a 2-year warranty. Damage caused by collisions is not covered unless the customer bought the ’CrashCare’ add-on (19 EUR per drone per month).

Troubleshooting: error code E-42
E-42 means the drone lost its positioning signal. Move the drone within 15 meters of an anchor beacon and restart it. If E-42 persists, recalibrate the beacons from the Nimbus Cloud dashboard under Settings > Beacons > Recalibrate.

Troubleshooting: error code E-17
E-17 means a propeller is blocked or damaged. Power off the drone, inspect all four propellers and replace any cracked one. Spare propeller sets cost 39 EUR.
